

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Project Overview: BookStore

BookStore is a comprehensive platform built using the MERN Stack (MongoDB, Express.js, React, Node.js). Designed to provide a smooth, fast, and reliable experience, it serves passionate readers and gift-seekers alike. Users can browse an extensive catalog by genre, author, and language, get personalized recommendations, read reviews, and easily purchase or reserve books across all devices.

Date	31 January 2025
Team ID	[SWTID-2026-7]108
Project Name	BookStore
Maximum Marks	4 Marks

Functional Requirements

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	- Registration through Form - Registration through Gmail - Registration through LinkedIn
FR-2	User Confirmation	- Confirmation via Email - Confirmation via OTP
FR-3	Book Search & Discovery	- Browse books by genre, author, and language - Generate and view personalized recommendations - Access and read user reviews

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-4	Purchasing & Reservation	• Buy books through a secure checkout process • Reserve favorite books for later purchase

Non-functional Requirements

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The platform must feature a responsive design that works flawlessly across computers, tablets, and smartphones, ensuring an intuitive browsing experience.
NFR-2	Security	User accounts, personal data, and payment transactions must be securely encrypted and protected against unauthorized access.
NFR-3	Reliability	The application must leverage the robust nature of the MERN stack to prevent crashes and ensure consistent, reliable operations during the buying or reserving process.
NFR-4	Performance	The system must deliver a smooth and fast experience, ensuring quick page loads even when searching through a vast collection of books.
NFR-5	Availability	The platform must maintain high uptime, allowing readers to explore the catalog, discover new releases, and make purchases anytime and anywhere.
NFR-6	Scalability	The backend and MongoDB database must be capable of scaling effortlessly to accommodate a constantly growing inventory of books, genres, and active users.
